About TEXPORT® Who we are	18

OUR MISSION: TO MAKE YOU FIREPROOF.

Making the impossible possible: This is the mission you face up to time and again. We demand no less of ourselves in providing the ideal support you need. What this means: Patented and innovative solutions that can make the difference when it counts. TEXPORT® develops protective clothing that is both easy-to-wear and ergonomic; a partner you can trust absolutely whatever the mission may be. Each size is perfectly tailored to suit the anatomy, provides high functionality and could not be more comfortable to wear. After all, the missions you face test the limits of physical endurance. So ideal protection is exactly what you need.

**> YOUR MISSION: ONLY FOR THE HARDEST.
OUR MISSION: TO MAKE IT EASIER.**

Seconds count, frequently. And every additional second you can hold out against these extreme conditions may be decisive. So it is the fabrics and materials used in the protective clothing that really make the difference. TEXPORT® is constantly on the lookout for new high tech materials, putting them through their paces in the most rigorous practical tests before they are used in series products. To raise the bar in performance and safety.

HPX X SYSTEM®

The HPX System® makes replacing a defective zip quick and easy instead of laborious and expensive. The service life of protective clothing increases several times over using the High Performance eXchange System, or HPX System® for short. You can also tell in an instant whether the front strip is properly closed thanks to the eye-catching design. Which makes things safer.

EU Patent 07121066.0

TEXPORT X TRIPLE FABRIC®

The Texport Triple Fabric® is a fabric reflector strip with a woven structure, making it extremely breathable and therefore extending service life. The reflective material forms a durable bond with the soft fabric. And the Triple Fabric® is less prone to long-run scuffing from wearing and washing.

EU Patent 08102991.0

AIR X BLOCKER®

The protectors in the inner lining create a permanent air cushion in the insulation system around the shoulders and guarantee enhanced safety that endures, even when wearing a respirator. The enclosed air insulates this exposed zone.

WICKING X BARRIER

The vapour barrier is permanently waterproof, breathable and washable. Which means: The GORE-TEX® vapour barrier prevents any moisture from seeping through the seams and keeps the inner lining of the clothing bone-dry, even after many turnouts and washes.

ERGO X PAD®

The Ergopad® by TEXPORT® is a cushioned, ergonomically prefabricated pad that fits snug around the knee in any posture and prevents pressure points. Heavily flame retardant, it differs from aramid nonwovens in preventing excessive water absorption, ensuring the trousers dry much faster after washing.

THE INNOVATIVE MATERIAL STRUCTURE FOR EXTREME PROTECTION AND COMFORT

Direct exposure to flame and radiant heat is among the greatest hazards that fire fighters face during turnouts. Heat battering through the material of protective clothing can cause burns.

Thermal insulation is key to staving off this effect and providing those crucial seconds. And this is precisely why EXPORT® developed the material structure X-TREME®. Thanks to its innovative material structure and new high tech intermediate layer, X-TREME® delivers substantially greater protection and comfort than required in the European standard EN 469. Radiant heat is blocked almost entirely, even under prolonged exposure.

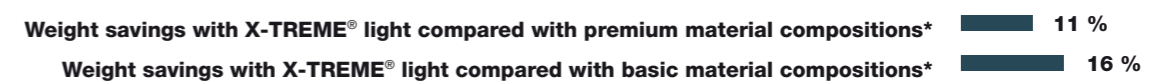

*Results (HTI, RHTI, Ret) confirmed in ÖTI, Test Report 59048.

LIGHT VERSION OF THE INNOVATIVE MATERIAL STRUCTURE FOR GREATER PROTECTION AND COMFORT.

Whether exposed to direct flame impingement or radiant heat, X-TREME® light delivers substantially greater heat protection and comfort than required in the European standard EN 469. But in developing X-TREME® light, the main focus was placed on weight. Helped by the lightweight material, X-TREME® light unites outstanding protection with enhanced comfort.

*This puts X-TREME® light in a range where fire fighters will experience a clearly noticeable increase in comfort.

Four layers go into X-TREME®: Shell, intermediate layer (TNX Heat Comfort Barrier), membrane (GORE-TEX® Fireblocker®N) and lining (Nomex® viscose).

X-TREME® light has three layers: Shell, intermediate layer (TNX Heat Comfort Barrier) and membrane/padded liner (GORE-TEX® Flameliner A®).

► PROVEN MATERIAL STRUCTURE FOR IDEAL FUNCTIONALITY.

Structure with spacer system membrane

GORE-TEX® AIRLOCK® delivers high thermal protection. The removal of textile insulation cuts heat stress and minimises moisture absorption. At the same time this innovative material guarantees unrestricted freedom of movement and rapid re-drying.

BASIC structure with GORE-TEX® Fireblocker® membrane

Thanks to the GORE-TEX® membrane, this basic version by TEXTPORT® is absolutely waterproof and breathable. It is made of three layers: Shell, membrane and expanded thermal insulation. The BASIC version satisfies the requirements of EN 469 and provides dependable protection and comfort.

TEXTPORT® uses premium ePTFE membranes by Gore. So TEXTPORT® banks on proven quality!

The grading system used here (top mark: ■ ■ ■ ■ ■) helps illustrate and compare. It is a general assessment of criteria determining protection and comfort.

Fire Explorer by TEXTPORT® is a protective outfit with a highly elaborate, technical design. It brings together ideal protection with the usual TEXTPORT® high standard of comfort. New colour combinations and the TEXTPORT® belt system loop, drag and bear mean that Fire Explorer is available to suit many different functions.

IB-TEX® is a Premium-Nomex® material, developed by TEXPORT® in close cooperation with IBENA®. Manufactured exclusively for TEXPORT®, it delivers extremely high mechanical values without the use of para-aramids. IB-TEX® sets new standards when it comes to mechanical strength, combined with an ideal look.

Integrated rescue loops in the upper back area

Exterior, eye-catching grab straps guarantee quick and easy access to the system, even in tricky circumstances and poor visibility. The rescue loop is fully integrated in the upper-body part of the jacket. Running from the back and around the chest and arms, the system ensures comfortable use during rescues. Its special design means you can drag and also carry the people who rely on you for rescue.

External grab strap beneath the side pocket

Additional rescue loops beneath the side pockets in the upper thighs of the trousers put the finishing touches to the drag system. The grab straps are located beneath the applied side trouser pockets. Their eye-catching grab straps also permit quick and easy access to the further rescue system at any time.

Drag system permanently integrated in the trousers

The special, permanently integrated workmanship means the system is always ready for deployment in just seconds. Simply take the grab straps to pull out the rescue loops. The system is also designed specifically to suit the clothing and could not be easier to wear.

Rapid rescue of fellow team members following accidents.

When accidents occur, the system also helps carry and drag incapacitated persons out of the danger area. This guarantees rapid and "safe" rescue of accident victims at any time, whatever the situation or their physical condition may be.

Retractable rescue belt in the chest area

The fire rescue loop system has a tunnel for an optional, additional insertion of a rescue belt in the chest area. Applied, eye-catching grab straps positioned outside the tunnel help pull the belt out. They also indicate clearly at any time whether the belt has been inserted.

Rescue belt and stabiliser

The rescue belt can be applied to ensure a firm stance; in emergencies, it can also be used for self-rescue from secured rooms. The unique construction makes the belt extremely easy to insert and retract. Proper inspection, maintenance and cleaning of the jacket could not be easier.

Standardised alternative to a harness.

Combined with a snap hook and safety harness, the EN 358 and EN 1498 type A-certified system is a flexible and simple alternative to standard fire department harnesses. Conforming to relevant standards, the integrated system thus reduces the additional equipment you have to carry. This saves weight and at all times delivers the requisite safety. The system is individually designed to suit the different jacket sizes and therefore offers ideal comfort. Additional, tailored solutions to facilitate maintenance and cleaning before and after turnouts deliver the finishing touches to this user-friendly system.

▶ A VISION PRECEDES EVERY MISSION.

For TEXTPORT®, it all began with a vision: Company founder Otmar Schneider had the idea of developing high tech protective clothing, rugged enough to cope with extreme situations yet dedicated to the principles of absolute functionality and practicality. In just a few years, TEXTPORT® grew to 60 employees in Salzburg plus roughly 380 seamsters in Macedonia and Bulgaria. Today our sales team markets throughout Europe the products we develop and manufacture. TEXTPORT® leads the market in Austria, is the dominant force in the relevant German manufacturing sector and continues to grow, as evidenced in the contracts to outfit the fire departments in Madrid or Rio de Janeiro.

Premium Quality for Absolute Safety

We take our responsibility towards customers very seriously indeed and, by continuously optimising our products, remain ahead of the field in terms of safety, functionality and quality. Furthermore, the quality of all raw materials is monitored to ensure compliance with the latest directives. Our highly experienced development department designs clothing to suit individual customers, assuring the best protection, comfort and functionality. We also maintain a continuous testing system for materials and workmanship, helping us improve processing methods and materials wherever we can.

From the Idea to the Product – A One-Stop Solution

From the idea and the processing of the raw materials to production itself: TEXTPORT® deals with every stage. Once intense research on the cut and the material structure and the practical tests have been passed in Salzburg, the projects move to Macedonia and Bulgaria for series production. To do this, all raw materials ordered and inspected in Salzburg are transported to the production facilities, where trained staff painstakingly and precisely stitch the clothing by hand. Our state of the art machines are ideally suited to the specific processing methods at hand.

Business Sectors

Our core business is spread across the sectors of firewear and workwear. We are dedicated to quality in both of these sectors, working hand in hand with our partners in the textile industry to continually optimise all our fabrics. We have a continuous system of live tests to ensure the practicality of our firewear. Our outfits include everything needed, from turnout gear to station wear, fire department boots to helmets and gloves.

Our Pledge to You: Performance and Fit:

We do not feel it is enough to deliver a product that provides ideal protection. We want our products to satisfy even the highest standards in comfort, fit and ergonomics.

One of the first aspects we look at in the initial stages of production is to create the best possible fit and ideal comfort. We consider more than the physiology and stamina of the people who wear our clothing.

Our ideal solutions also zero in on the details, from the position of the pockets to the arrangement of Velcro fasteners. We have our own size system and can therefore adapt our clothing to fit almost any wearer.

To make your difficult job that bit easier.

Our Service: Always at Your Disposal:

Perfectly tailored product solutions won't work unless preceded by extensive consulting in which all of your requirements and wishes are clarified.

This is why our field staff travel internationally to support our customers and sales partners on the ground. We develop an individual clothing concept to fit your specifications like a glove. The function, comfort, protection and design will convince you. And if your clothing does ever need repairs, you can take it for granted that we will carry them out for you as fast as humanly possible. We have a widespread service and dealer network, so you can call on us at any time.

Innovative Solutions, by Professionals, for Professionals

Innovation has driven us from the very first day.

In recent years our research has helped create unique selling propositions: examples include our patented material compositions X-TREME® and X-TREME®light, our textile reflector strip TRIPLE FABRIC® and our HPX SYSTEM® (High Performance eXchange System) in addition to our own ergonomically formed knee pads.
